SAFE AT SCHOOL

Part of the School Health Program

SAS is a part of the School Health Program (SHP)

The hygienic situation in most government schools is very poor. The toilets are very old, not well cleanable and not hygienic. The groundwater is not pure because the use of pesticides in agriculture and should be filtered. The area around school mostly is open so outside taps are not save for robbers.

With the safe at school program we are trying to create a safe environment in and around school. This way we try to strive for the ideal situation:

- Sufficient water taps to make it possible to carry out the BAS program
- Clean and sufficient toilets separate for boys and girls
- Clean filtered water in water tank and necessary pump and filter
- Fence around the school
- Well organized school by 5S program:
 - Sort: categorize and classify all materials
 - Shine: keep it clean and fixed
 - Setup: put it in the place where it belongs
 - Standarised: work by standards
 - Sustain: do maintain it

We always provide sufficient and adequate water taps and a water tank before the BAS program is carried out.

Before the BAS program is carried out we always will provide sufficient and adequate water taps and a drink water tank to carry out the practical program, teaching the children how to wash their hands and brush their teeth.
